## THOUGHTS OF CEO

We operate in sectors that we believe in, and our organizational style is that of a tech co-founder. So, in that context, we are practically earning something like stock options when we do a cost-plus equity model with startups. And the second part of our revenues is expected to come from corporates, where we operate in a manner that is somewhat like the service sector. The only difference is that instead of engaging in body shopping, we are serving as enablers for startups and doing end-to-end innovation projects. A large part of our model is built on the characteristics of innovation.

We are getting into longer and more significant roles in startups, hence the larger level of equity ownership. This type of product venture mix is what we anticipate the market to look like in three to five years. Our UK entity is now fully operational. We have opened discussion with accelerator groups and startup entities in the UK startup ecosystem. We are in the process of expanding our senior management team in the UK to enable the same.

As a shareholder in Xelp what you essentially own is something more analogous to a leveraged mutual fund than a standard mutual fund, as Xelpmoc is an instrument which aims to increase success rates and delivery assurance by ensuring that these sectors, which are typically deficient in technology, have access to technology at par with global standards. I believe that is the objective, and since we are focused on executing it effectively, we stand to profit from the wealth at the bottom of the pyramid.
